1st Report in Computational Physics

James Lee

March 16, 2016

Abstract

This report basically covers nothing.

1 Background

Although I thought it would be boring to write this report at first, I found it quite interesting while writing it. It turned out that talking was indeed much cheaper than coding.

2 Main Contents

I began to download Linux the minute I knew about *Steam* on Linux. However, the installation of Python was hours later than that, for I had been playing *Civilization* on Linux before.
I already had a github account before, so I didn't bother register another one. Writing Readme.md turned out to be a lot of fun.
By the way, you guys should try telnet towel.blinkenlights.nl in Bash.
Well, I guess this is pretty much it.

3 Conclusion

Linux is a lot of fun.

4 Acknowledgement

Thanks to Prof.Cai for choosing Python in this course. I am really looking forward to following courses.
